How do I set a Trailing Stop Order?

TRADING · https://en.wbtrade.eu/knowledge-base/trading/how-do-i-set-a-trailing-stop-order/

Trailing Stop works only on the desktop MT4 Platform.

To set a trailing stop:

1- Right-click on your open position

2- Choose 'Trailing Stop'

3- Select the number of ticks distance to the current market price from the list, or specify one from the Custom button.

4- The Trailing Stop order will be activated when the order moves in a profitable direction by the exact number of Ticks set.

Note: If the client terminal is closed, the trailing Stop function stops working because it is not saved on the Server, and only the last present Stop Loss is considered valid.
